# STAND UP

## Model description

**Design:** Georg Appeltshauer.

**Framework:** Body with foamed-in metal structure, comfort foam insert, and soft foam cover. Visible metal parts in pearl gloss chrome-plated finish, optionally bright chrome-plated finish or lacquered in RAL colors.

**Mechanics/operation:** Smooth-running mechanics specifically developed for this armchair. The chair can be electrically tilted backwards and the footrest extended to approximately 106 cm allowing the seating to be comfortably positioned for each person. Not only that but the seat height can be individually adjusted within a 9 cm area when in the normal seating position and, if you like, can raise itself up to 60 cm with a slight forward angle to assist you in getting into and getting out of the chair. Separate adjustment of foot section and tilt/height by means of two 24 volt motors. Foot section and armchair can remain in any desired position independent of each other.

**Motors:** Two direct-current linear motors with 24 volt.

**Power:** Standard version with power supply. Special version with rechargeable battery and external battery charger. The rechargeable battery is integrated under the seat of the chair.

**Operation:** Switch is integrated in the side frame and out of sight. Standard version is for right-handed persons, by request for left-handed persons, or with remote control with coiled cable.

**Upholstery:** Seat and foot section: Multi-layer foam

construction with comfort layer and upholstery padding. Back has additional comfort padding and incorporated lumbar support.

**Armrest**

features additional soft padding for extra comfort.

**Cover processing:** Body is tightly covered on the outside. Seat and back are finished with comfort in mind. Wrinkle formation is possible. The covers are not removable.

**Neck cushion:** The loose neck cushion (FM-0135/97) is laid across the back and held in place by means of counterweight.

**Seating comfort:** Ergonomically designed seat and back profile with additional soft padding. Excellent foot section length of approx. 106 cm.

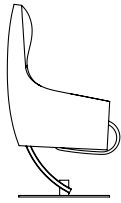

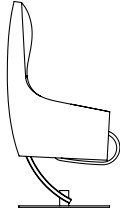

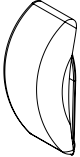

**Round base:** Double-shell steel structure with closed plate at the bottom. The shell above is surface-coated. The armchair rotates 360° on its own axis thanks to maintenance-free mechanical bearings. The turning circle of the version with power supply is limited to 330°.

**Gliders:** Carpet gliders as well as parquet flooring gliders for the round base are included for on-site mounting. **Power supply/connections:** With European flat plug, 230 volt, upon request export version as per arrangement.

**Safety:** The foot section is designed for use as a footrest and has a maximum weight capacity of 30 kg. The armchair is designed for a maximum weight capacity of 120 kg.

**Check whether the customer can connect the charger to the lower side of the chair by its own or a version with power pack is required.**

## Environmental balance

**Frame:** The steel construction is untreated and fully recyclable.

**Padding:** The polyurethane foam moulded is produced with water vapour and is CFC-free.

**Adhesives:** Most adhesives are water-based products. For complex bonds, we now use adhesives containing reduced amounts of solvent.

**Mechanical design:** All moving parts are screwed together and are easily replaceable.

**Mechanical design:** All wear parts (e.g. gas-filled springs) are easily replaceable.

**Leather covers:** The dyes in our shagreen are free from solvent on completion of the production process. Since 1985, FSM has processed leather with reduced chrome content and free from solvents. This exceeds German environmental standards.
